📍 St Marks Rd Randwick NSW

SKILLS

Languages

Javascript (ES6), Typescript,
HTML, CSS, LESS, C#, Java,
SQL, Python

Frameworks

Angular (Treegrid, Formly),
ASP.NET MVC, ASP.NET Core,
React, Vue, Django, Node.js,
Jasmine/Jest

Tools

Git, Webpack, Azure Dev Ops,
Netlify, Heroku, Github Actions,
MySQL, PostgreSQL

EDUCATION

Dublin City University

2014 - 2018

BSc in computer applications and
software engineering (2.1 grade)

St Eunan's College

2008 - 2014

Leaving Certificate

PROJECTS

My Personal Website

A customisable web app that
displays my portfolio.

Tech Stack: React, Django,
Django REST Framework, pyJWT,
PostgreSQL, Netlify, Heroku

Answer Box

Stackoverflow for leaving cert
questions.

Tech Stack: Android framework,
LAMP (Linux, Apache, MySQL,
PHP)

ABOUT ME

I am a software engineer looking for a new challenge. I have experience at all levels of the stack. Most of my experience comes from creating front-end applications with Javascript frameworks, but I also have good experience developing RESTful API's. I am a hard worker with a passion for technology. I am always willing to adapt to change and improve my skillset through continuous learning.

EXPERIENCE

Software Engineer III @ Keyedin Solutions

Jan 2020 - May 2023

- Re-write Keyedin's old business portfolio management ASP.NET MVC application into a modern, more aesthetically pleasing and higher performing Angular application.
- Develop RESTful APIs using ASP.NET Core that serve data to the Angular front-end.
- Prevent the introduction of new bugs by writing unit tests with Jasmine.
- Communicate and collaborate with developers, testers, business analysts and product experts in an agile setting.
- Give time estimations for stories during the sprint planning phase.
- Demo newly added features to the product team.
- Perform code reviews.

Intern Software Engineer @ Liberty IT

March 2017 - September 2017

- Worked on an agile team with daily stand ups, debugged code and improved test coverage within the code base. The project involved mostly work with web services created using IBM technologies.
- Learned how to develop scalable frontend web applications at the Liberty IT training academy. We used React, Redux, Node.js and MySQL to develop something similar to the internally used Liberty IT travel booking app.
- Created a front-end dashboard written in JavaScript to help my team better monitor the health of our product in the staging environment.
- Developed an android application to help support the idea of safe driving in the insurance industry.
